MORE POWER FROM MEETINGS

Publishers can make their meeting content more discoverable by making it part of their online published content, boosting awareness of both the meetings or events a publisher might sponsor and the ground breaking scientific content they cover.

HighWire ingests meeting abstracts as a separate content type that can be searched or tracked separately from article content. Meeting abstracts can be represented in their own site, or as supplemental content as part of a journal site, and can be deposited separately with their own DOIs to Crossref.

Through metadata supplied in the abstract itself or in the TOC manifest, meeting abstracts can show the agenda of a particular meeting and the abstracts for specific tracks and sessions

Meeting abstracts may include abstracts from a variety of meeting activities such as lectures, plenary sessions and poster sessions. Publishers can have meeting abstracts searched along with their other journals content, or allow readers the option to include or exclude meeting abstracts.

The Royal College of Paediatrics and Child Health used HighWire Meeting Abstracts for its Annual Conference, promoting and sharing its plenary sessions and its oral, poster, late-breaking and scientific abstracts.
