Streamlined manuscript submission and tracking

HighWire

HighWire Submissions simplifies and streamlines the manuscript submissions process, helping you increase efficiency, decrease costs and dramatically reduce time to publication.

We configure HighWire Submissions to fit your unique workflow needs and adapt to the ever-changing needs of the scholarly community. Submissions is designed to grow and flex as you do, letting you easily make changes to reflect your editorial practice and peer-review processes.

With single sign-on and a simple interface, all stakeholders can enjoy a quick, easy and trackable submission and review process. This makes the submission process easy and intuitive for authors and reviewers, facilitating rapid and rigorous peer review. Intelligent admin tools and reporting functionality gives your publishing staff unrivalled insight to help you realize efficiencies and track progress towards strategic goals.

For low volume publishers with straight-forward submission processes, we offer a simple, flat rate pricing structure, so you know what you're going to pay regardless of the number of submissions.

For publishers with more complex needs, we offer a powerful and highly customizeable workflow that is built around you – rather than the other way around.

"bioRxiv's current annual doubling in submissions and usage has tested the capabilities and reliability of HighWire's technologies, with excellent results.

The success of this seasoned, cutting-edge preprint platform meant that HighWire was the obvious technology partner for medRxiv."

Dr John Inglis, co-founder of medRxiv and bioRxiv, Cold Spring Harbor Laboratory.

Features & benefits

✅ **Configured to your workflow**
Whether it's a single publication or a complete publishing program, you can configure the platform to suit your unique needs.

✅ **Critical business insight**
Access powerful data reporting to identify efficiency gaps and better understand your users.

✅ **Intuitive and simple navigation**
Our modern approach showcases your brand while streamlining UX to only the tools and features your authors and reviewers really need.

✅ **Increase efficiency and speed time to market**
Unlimited HTML email templates, scheduled reminders, and proxy-access for journal staff make it easy to manage editorial workloads.

✅ **Reliable, robust and revolutionary**
99.95% uptime and regular feature upgrades mean you always have best-of-breed manuscript submission tools and tracking.

✅ **Integrates with preprint services**
As designers of bioRxiv and medRxiv, we can create integrated preprint repositories and transfer seamlessly between sites.
